

MSSL/UCL studies in preparation for Gaia

By S. Pasetto

In collaboration with

D. Kawata, J. Hunt and the Gaia-group @ MSSL

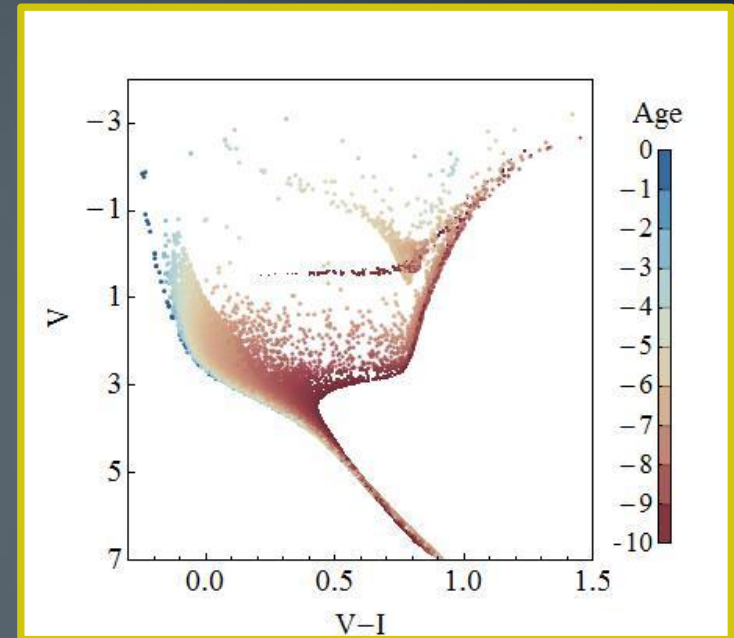

External collaborators:

C. Chiosi, G. Bertelli @

University of Padova & Obs of Padova

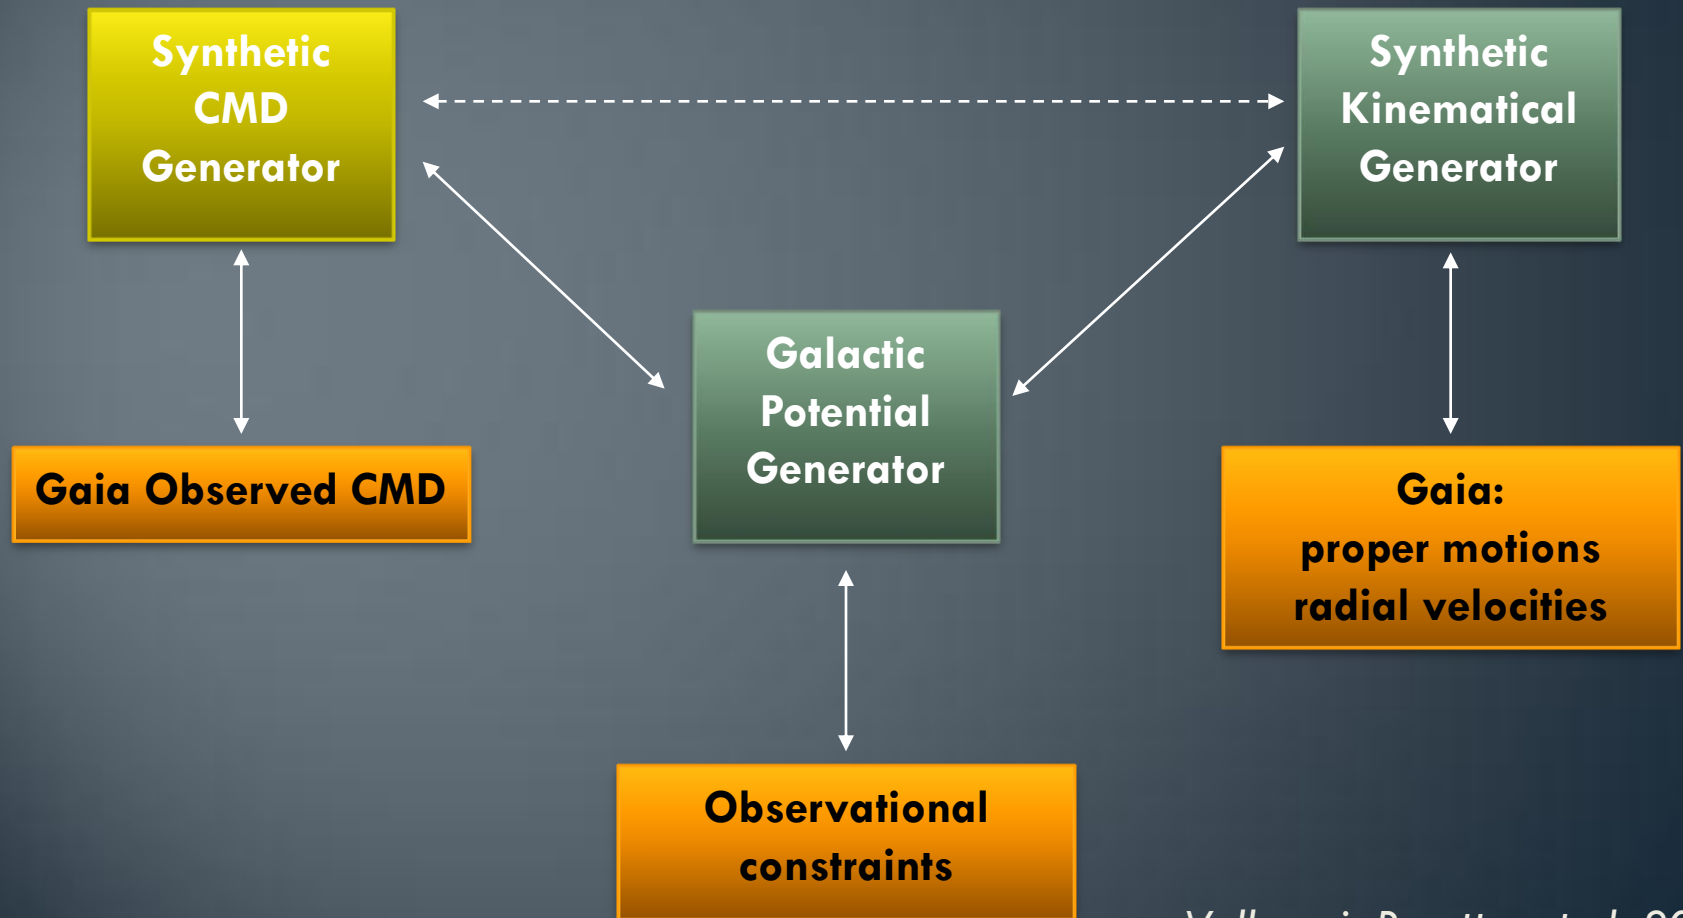

Synthetic CMD in the Gaia era

how to extract
informations?

*Chiosi, Pasetto et al. 2012
in preparation*

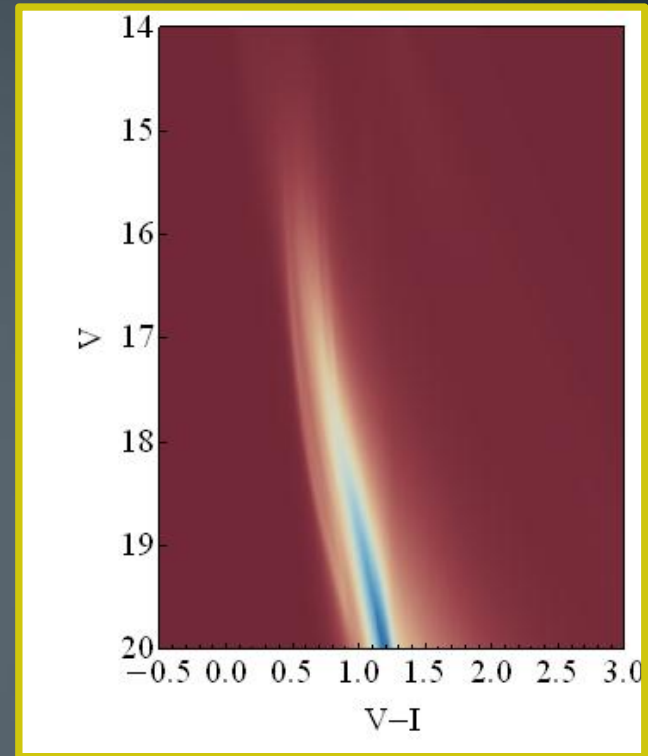

The Padua's Galaxy Model

Photometry from N-body

Rahimi, Kawata et al. 2012 in press

Extinction effects, dust models

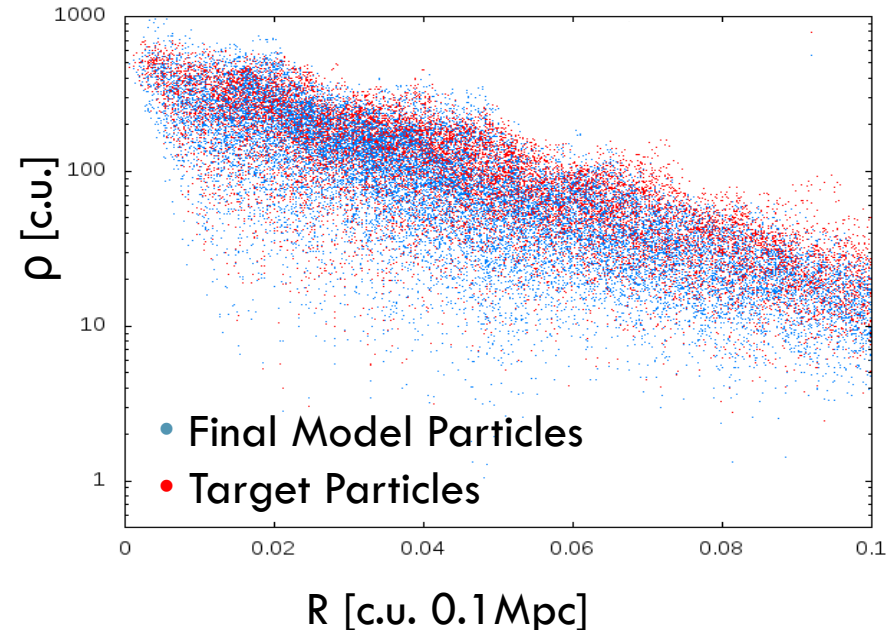

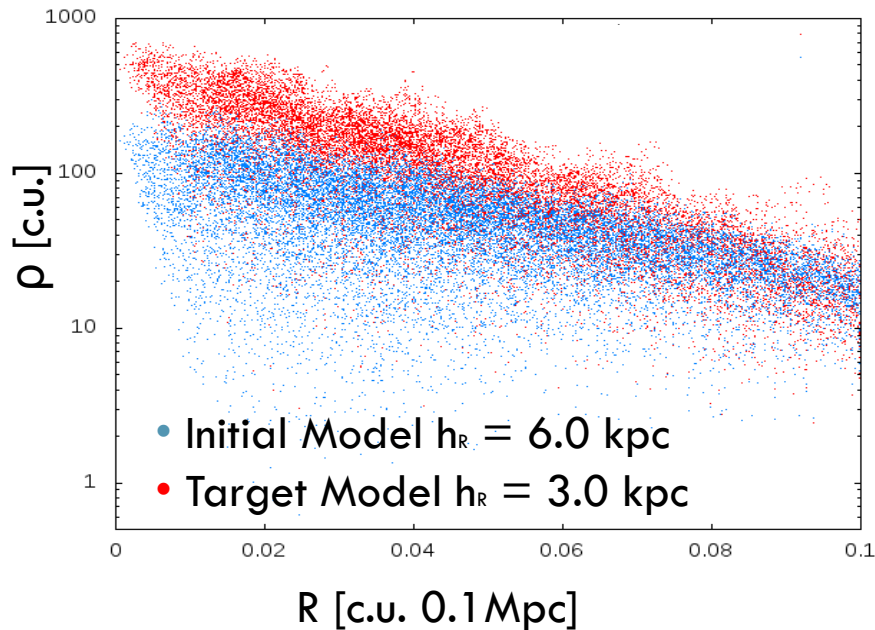

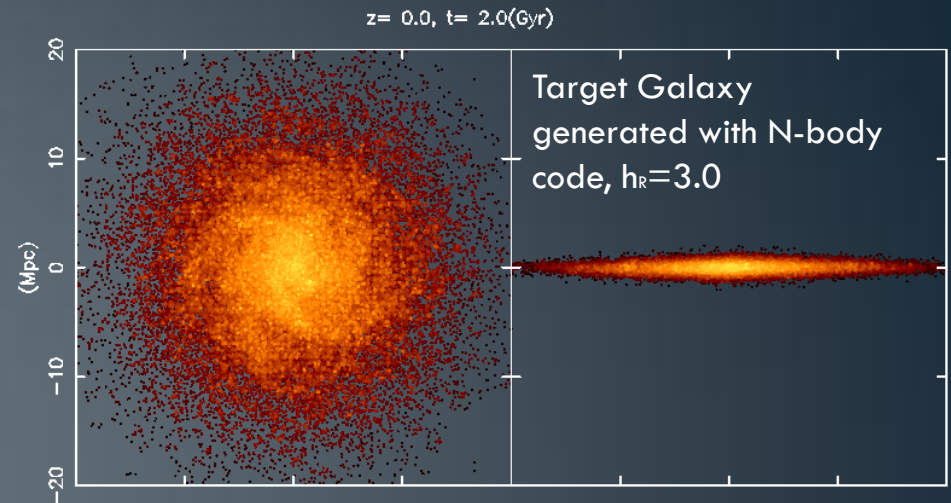

*Pasetto, Kawata et al. 2012
in preparation*

A Particle Based M2M Method

J. Hunt, Kawata et al. 2012 in preparation

M2M implemented to use

1. SPH kernel
2. Accounting for self Gravity
3. Works for disc galaxies

Work in progress on:

Some theoretical aspects

- The role of the extinction on the structure characterization
- Advancing Padua Galaxy model
- Coupling of M2M technique with photometry

Some practical aspect

- Synthetic error injection in the models
